Commit	File	Main Change
0cc5579	kappa_sample	Created with apache/airflow, cloud-native-pg and kubernetes
f7f12b4	consensus_labels and detector_validation	This was our first analysis of our kappa sample. Consensus_labels show we agree
4fc6ffb	pr-analyzer-maven-skip-bad-repos/src/main/java/com/example/aichecker/KappaSampleReanalysisWorkflow.java	Created kappa sample reanalysis workflow to preserve the same kappa sample
e51ae75	pr-analyzer-maven-skip-bad-repos/detector_validation_completed.csv pr-analyzer-maven-skip-bad-repos/kappa_sample_completed.csv pr-analyzer-maven-skip-bad-repos/kappa_sample_reanalyzed.csv	Reran the kappa sample detection.
519e69d	pr-analyzer-maven-skip-bad-repos/repos.txt	
20d8e58	pr-analyzer-maven-skip-bad-repos/kappa_sample.csv	Regenerated kappa sample, home-brew, sympy, kubernetes. I think based on new random seed: private static long kappaSampleSeed() {

		String value = System.getenv("KAPPA_SAMPLE_SEED");
		if (value == null || value.isBlank()) {
		return ThreadLocalRandom.current().nextLong();
		}
		try {
		return Long.parseLong(value.trim());
		} catch (NumberFormatException e) {
		throw new IllegalArgumentException("KAPPA_SAMPLE_SEED must be a valid integer.");
		}
		} because sympy ai disclosure was not picking It up well

57fa0c1	pr-analyzer-maven-skip-bad-repos/kappa_sample_reanalyzed.csv	Kappa regenerated
24515b4	pr-analyzer-maven-skip-bad-repos/kappa_sample.csv	Kappa regenerated again. Also we have been calculating accuracy, precision, recall, specificity for this 150 kappa sample while doing this pr-analyzer-maven-skip-

		bad-repos/detector_validation.csv
347f402	pr-analyzer-maven-skip-bad-repos/src/main/java/com/example/aichecker/PrAnalyzer.java	Max number of prs in 4 months rule change
Ad63fd0	pr-analyzer-maven-skip-bad-repos/pr_dataset_output.csv	Ran the dataset
0acb386	pr-analyzer-maven-skip-bad-repos/repo_visibility_summary.csv pr-analyzer-maven-skip-bad-repos/visibility_correlation.csv	Added the repo visibility and calculated spearmans
a26a3df	pr-analyzer-maven-skip-bad-repos/src/main/java/com/example/aichecker/ExtendedValidationWorkflow.java	Extended validation sample. “`Sample ID` values, uses the same successful analysed PR eligibility fields present in the dataset, and uses the fixed default seed `20260724` unless an explicit seed is supplied as a final argument. If the first four selected repositories do not bring the combined original-plus-extended sample to the required `342` rows, the command continues through the same

		seeded repository order and adds another repository.” java -jar target/pr-analyzer-maven-1.0.0.jar --code-validation-sample extended_validation_sample.csv anna_extended_labels.csv java -jar target/pr-analyzer-maven-1.0.0.jar --code-validation-sample extended_validation_sample.csv minseo_extended_labels.csv this was cilium, dev-pandas, ghostty-org, ocaml . 50prs per repo to get 200 prs which would exceed our minimum sample needed for confidence interval. This was combined with our IRR prs to get 350 in total
9a8546c	pr-analyzer-maven-skip-bad-repos/pr_dataset_output.csv	Ran the big dataset again
a125865	pr-analyzer-maven-skip-bad-repos/all_repo_validation_sample_seeded.csv	Changed our approach for the extended detector validation, decided to use upto 20 per repo.

C0b7407	pr-analyzer-maven-skip-bad-repos/all_seeded_detector_validation.csv	Combined the samples, lots of files deleted in process idk
767ef70	pr-analyzer-maven-skip-bad-repos/anna_seeded_labels.csv	Rechecked some prs
779a704	pr-analyzer-maven-skip-bad-repos/repos.txt	Removed open telemetry repo and removed it from our detector validation and pr output
9502c13	pr-analyzer-maven-skip-bad-repos/all_repo_validation_sample_seeded.csv	Tightening of rules then rechecking our detector validation
6f3b773	pr-analyzer-maven-skip-bad-repos/pr_dataset_output.csv	Final repo analysis with 41479 prs
f1908cc	pr-analyzer-maven-skip-bad-repos/spearman_correlation.csv	Spearman correlation
8279af2	pr-analyzer-maven-skip-bad-repos/src/main/java/com/example/aichecker/AiDisclosureDetector.java	Fix home-brew rules becuase the pr description was ambiguous. Reran the pr dataset output for the same exact home-brew prs (no new window) but with this new rule added, updated repo compliance summary

Da9c42c	pr-analyzer-maven-skip-bad-repos/repo_compliance_summary.csv	Updated Joomla to explicitly say that it is an ambiguous disclosure
b824757	pr-analyzer-maven-skip-bad-repos/repos.txt	Error using cncf instead of cloud native pg, removed the cncf prs in the detector validation and pr dataset output, replaced with cloyudnative keeping same date range
44c2808	pr-analyzer-maven-skip-bad-repos/repos.txt	Removed mesa repo from everythung
9f8d541	pr-analyzer-maven-skip-bad-repos/repos.txt	Removed stacdev from everything
